# Shahid Kamal

Boston, MA| kamal.sh@northeastern.edu | LinkedIn | |Portfolio |Github | +18573511460

## EDUCATION

**Northeastern University** Boston, MA
MS Electrical and Computer Engineering Expected Dec 2026
**Relevant Coursework:** Machine Learning Operations, Large Language Models, Machine Learning, Deep Learning, Advanced Computer Vision, Reinforcement Learning, Algorithms, Robotics Sensing and Navigation

**Aligarh Muslim University** India
B.E Electrical Engineering 2019-2023

## EXPERIENCE

**Checkit Analytics** - Machine Learning Engineer (California, United States) Jan 2026 - Present
- Built LLM-based RAG pipelines for grounded financial question answering and analytics
- Fine-tuned and deployed Qwen3-4B as the in-house backbone LLM, eliminating external API costs
- Prototyped and shipped AI products using Python, SQL, and AWS in cross-functional teams

**Centre of Advanced Research in Electrified Transportation -** Research Intern (Aligarh, India) Dec 2022 - Feb 2023
- EV battery systems suffered from inefficiencies, leading to high energy loss during charging
- Optimized EV Battery Management System using Machine Learning, improving charging efficiency by 7%
- Used Random Forrest and LSTMs, reducing energy loss during charging by 10%

**Indian Institute of Information Technology -** Summer Research Fellow (Allahabad, India) June 2022 - July 2022
- Worked with the research team on developing a dynamic routing mechanism in Capsule Neural Networks
- Researched different Routing mechanisms in CNNs and presented findings in the seminar
- Developed a hybrid architecture inception_efficientcaps for dynamic routing in CNN Networks

## PROJECTS

**Jobly – Agentic Job Search & Outreach Platform** Feb 2026 - Present
- Built a multi-agent, agentic AI system automating job search, outreach, tracking, and interview prep
- Designed LLM agents for resume tailoring and personalized recruiter email/LinkedIn messaging
- Implemented a stateful automation pipeline with human-in-the-loop controls and persistent memory

**Lab Lens – Healthcare AI and MLOps Project** Sep 2025 - Dec 2025
- Built an end-to-end healthcare AI system for medical report summarization, diagnostic image analysis, and risk prediction
- Implemented a RAG Q&A pipeline enabling semantic search and patient-friendly insights from complex medical reports
- Designed MLOps workflows with model evaluation, monitoring, and bias checks for reliable and scalable deployment

**Detection of COVID-19 from Chest X-ray images using Deep Learning Techniques** Aug 2022- May 2023
- Designed a custom CNN achieving 97.2% accuracy in COVID-19 classification using deep learning
- Implemented model compression and acceleration techniques to enable deployment on resource-constrained hardware
- Evaluated and validated performance on real-world CXR datasets, achieving clinical-level detection metrics

## SKILLS

**Programming Languages:** Python, MATLAB, C, C++, SQL
**Machine Learning frameworks**: TensorFlow, PyTorch, Keras, Numpy, Matplotlib, Pandas, Scikit-learn,
**Robotics:** ROS 2, SLAM, Robotics Perception, Sensor Fusion, Kalman Filter, Navigation
**Tools**: Git, GitHub, AWS, GCP, CI/CD Integration, Docker, Kubernetes
